Overview

As part of the project, saucedemo we choosed to test few functionalities of 'https://www.saucedemo.com/' web application.

This document serves as high level test planning document with details on the scope of the project, test strategy, test schedule and resource requirements, test deliverables and schedule.

Scope

The scope of the project includes testing the following features of https://www.saucedemo.com/' web application.

Inclusions

-  **Login**
-  **Logout**
-  **Product details Display Page**
-  **Add to Cart**
-  **Remove from Cart**
-  **Home Page**
-  **Side Menu Options**
-  **Footer Options**
-  **Filter options**

From our understanding, we believe above functional areas need to be Tested.

Test Environments

- ✓ win 11 google chrome
- ✓ win 8.1 firefox
- ✓ andriod 14

Exclusions

All the features except that are mentioned under 'Inclusions'

Test Strategy

As part of Functional Testing, we will follow the below approach for Testing:

Step#1 Creation of Test Scenarios and Test Cases for the different features in scope.

- ❖ We will apply several Test Designing techniques while creating Test Cases:
 - ✓ Equivalence Class Partition
 - ✓ Boundary Value Analysis
 - ✓ Decision Table Testing
 - ✓ State Transition Testing
- ❖ We also use our expertise in creating Test Cases by applying the below:
 - ✓ Error Guessing
 - ✓ Exploratory Testing
- ❖ We prioritise the Test Cases

Step#2 Our Testing process, when we get an Application for Testing:

- ❖ Firstly, we will perform Smoke Testing to check whether the different and important functionalities of the application are working.

- ❖ Once we receive a stable build, which passes Smoke Testing, we perform in depth testing using the Test Cases created.
- ❖ Multiple Test Resources will be testing the same Application on Multiple Supported Environments simultaneously.
- ❖ We then report the bugs in bug tracking tool (**Jira**)

As part of the Testing, we will perform the below types of Testing:

- ✓ Smoke Testing and Sanity Testing
- ✓ Usability Testing, Functionality & UI Testing
- ✓ We repeat Test Cycles until we get the quality product.

Step#3 We will follow the below best practices to make our Testing better:

Exploratory Testing - Using our expertise we will perform Exploratory Testing, apart from the normal execution of the Test cases.

End to End Flow Testing - We will test the end-to-end scenario which involve multiple functionalities to simulate the end user flows.

Defect Reporting Procedure

During the test execution:

- ✓ Note: Any deviation from expected behavior by the application will be noted. If it can't be reported as a defect, it'd be reported as an task/issue .
- ✓ Any usability issues will also be reported.
- ✓ After discovery of a defect, it will be retested to verify reproducibility of the defect.
- ✓ Screenshots with steps to reproduce are documented.
- ✓ Defects will be documented in a excel and Jira on x-ray App.
- ✓ Test scenarios and Test cases will be documented in an excel document.

Roles/Responsibilities

Name	role
Ibrahim	Test plan + login (Manual ,automation)+ api for pets and order item table from DB
Manal	Side menu(Manual,automation)+Filter(Manual_ automation)+ api for pets and Orders table from DB
Ramzy	Home page (manual) + 3 APIs + user table DB
Martina	Cart (add-remove) Manual+ automation , API for store and user Review and product table DB
Mai	Product details page , footer (Manual)+ api for user and payment table from DB

Test Schedule

Following is the test schedule planned for the project

Task	Time duration
Creating Test Plan	From 1 may to 3 may
Test Case Creation	From 4 may to 8 may
Test Case Execution	From 9 may to 11 may
API Cases Execution	From 12 may to 14 may
Test automation	From 15 may to 19 may
Summary Reports Submission	20 may

Test Deliverables

The following are to be delivered to the client:

Deliverable	Description
Test Plan	Details on the scope of the Project, test strategy, test schedule, resource requirements, test deliverables and schedule
Functional Test Cases	Test Cases created for the scope defined
Defect Reports	Detailed description of the defects identified along with screenshots and steps to reproduce on a daily basis.
Automation script	Selenium framework with Java

Tools

The following are the list of Tools we will be using in this Project:

- ✓ **Jira** Bug Tracking Tool
- ✓ **x-ray** App
- ✓ **Snipping** Screenshot Tool
- ✓ **Word** and **Excel** documents
- ✓ **EaseUSRecExperts** screen video recorder
